

Earth is a Nature's Home

'Keeping eyes on the stars, feet on the ground',
But one also needs to respect ecology around
Earth- is a nature's home, and all lives' boarding,
Sun-powered it is, space-ship of precious hoarding

Since ages it's in motion, every second of the year,
With a speed of two hundred & seventeen kilometer
And floating around the Milky-Way in a Galaxy's center,
Inside the spiral arm, whose name is 'Orion-Spur'

But we humans messing around and create pollution,
Causing global warming, and some species' extinction
21st century Man-Kind is X-Generation "astronaut",
Living in a critical Galaxy's wrecked space-craft

Raising our vibrations with a mindful effort,
Our flight could be a pollution-free comfort
Planting the trees and divest from fossils' fuels,
Lessen the land-fill, and lower plastic-uses

Let us not waste water, and lower use of power,
Set in the yard, compost-bin and bird-feeder
Earth-Day isn't just to remind planet's damage,
A global goal relies on meeting everyone's pledge!
